# Script Base Effects Notice Paper

From version 5.0, all effects that added in this package are based on script animation for better performance of effects direction. You already saw scripts based on effects like ball spread inner to outer, wall arise, explosions to forward.

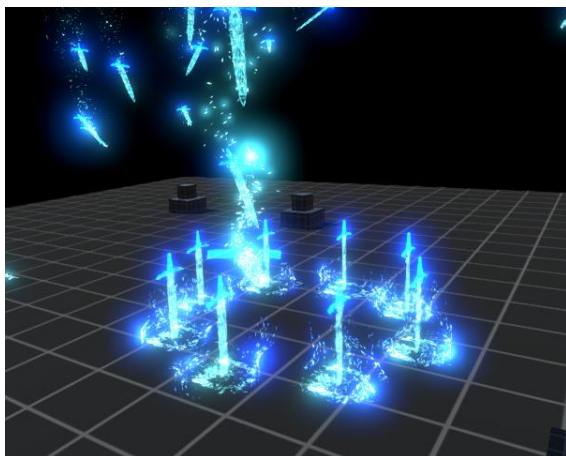

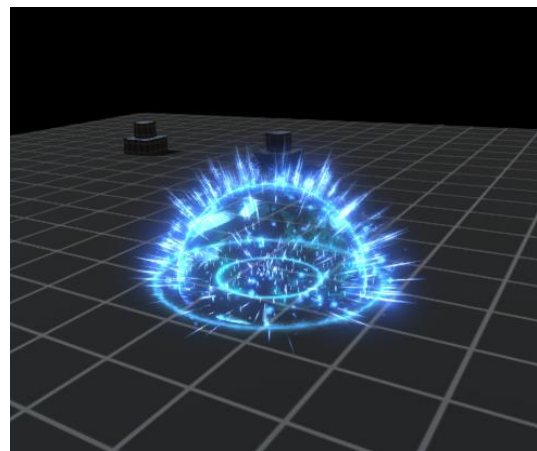

(Scripts used in Effect_76)　　　　　(Scripts already used in old version)

Although many scripts are used, please don't warry about this. Scripts just for direction effects animation what I thought like make objects, rapid move, etc. If I don't use scripts, can't show effects performance to you. Except original one object base effects.

(Scripts based on effects)　　　　　(Original simple effects)

Scripts aren't important in this pack. Scripts are just tool for show what I thought to you. If scripts are obstacle to your project, delete them. I recommend make your own effects using your methods. Just refer script base effects when make your own effects or effects setup to your projects.

Thanks!
